3.68% G BI A D C

The result showed that the TOPCon BIPV module has higher energy yield performance, which is up to 3.68% higher compare to PERC BIPV modules, the majority of the contribution from lower degradation, and optimized temperature coefficients.

The solar power plant on which the investigations were carried out is located in Feidong (latitude 31°34′N, longitude117° 19’ E),
